FOREWORD

This is the tenth issue of Crops Statistics of the Philippines, an annual publication of the Bureau of Agricultural Statistics (BAS). As in the previous issues, this report presents annual production statistics of 21 major crops and 20 minor priority crops with national and regional levels of disaggregation. These crops are classified into Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root Crops. In the case of banana and mango, production statistics are disaggregated by major variety. The reference period is 2008 to 2012.

The production statistics are presented in the order of the above crop classification. Each classification is preceded by a brief description of the trends of area, production and yield and the major factors affecting these trends and the major producing regions.

This report was prepared by the Crops Statistics Division (CSD) of the BAS. It serves as a ready reference for various stakeholders in the crops subsector of agriculture. The BAS continuously pursues the improvement of the delivery of its products and services. Hence, it welcomes comments and suggestions from the readers for further improvement of this report.

EXPLANATORY NOTES

Scope and Coverage

Crop production statistics are generated for all regions and provinces except Batanes. Quarterly crop surveys cover all commodities, however, this publication focuses on the following forty seven (47) major and priority crops:

	<u>MAJOR CROPS</u>	<u>PRIORITY CROPS</u>
CEREALS	Palay and corn	
FRUIT CROPS	Banana, calamansi, mango, pineapple	Durian, mandarin, mangosteen, lanzones, papaya, rambutan, orange, watermelon, tamarind
NON-FOOD & INDUSTRIAL CROPS	Abaca, coconut, coffee, rubber, sugarcane tobacco	Cacao, cashew, cotton
VEGETABLES, ROOTCROPS & TUBERS	Cabbage, camote, cassava, onion, eggplant, garlic, mongo, peanut, tomato	Asparagus, broccoli, carrots cauliflower, gabi, ginger, gourd, habitchuelas, lettuce, okra, pechay-chinese, pechay native, ubi, white potato

Sampling Methodology

The sampling design of Palay and Corn Production Survey (PCPS) was based on the results of 1991 Census of Agriculture (CAF). The survey domain was the province. It employ's a replicated two-stage stratified sampling design. The barangay was the primary sampling unit (psu), which was selected using a probability proportional to size (pps) scheme. The farming household served as the secondary sampling unit (ssu), which was selected systematically.

A non-probability survey was employed for *other crops*, crops other than palay and corn. A "5 x 5" design was used in the selection of samples with the province as the domain. The top five (5) producing municipalities were chosen from each province. From each of these municipalities, five (5) sample farmers were selected as respondents.

In this two-stage design, the municipalities served as the primary sampling units (psu), and farm households as the ultimate sampling units (usu).

Data Collection

For cereals, data collection is done quarterly during the first twelve (12) days of the month after the reference quarter. For other crops, quarterly data collection is conducted simultaneously with the monthly Farm Prices Survey (FPS) in the last ten (10) days of February, May, August and November.

Each round of the PCPS generates the following: (1) Final estimate of production for the immediate past quarter of the current survey round; (2) Forecast production for the current quarter based on standing crop; and (3) Forecast production for the next quarter based on planting intentions of farmers.

Data Review and Analysis

Data review and analysis are conducted quarterly to ascertain the accuracy of the data collected from probability and non-probability surveys. These activities start at the Provincial Operations Center (POC) after data processing using prescribed review materials. All provincial estimates undergo further data review at the regional level. All validated regional and provincial estimates are brought to the Central Office for final review. The BAS Director presides over the National Data Review, which is participated in by the Assistant Director and Division Chiefs, Regional Agricultural Statistics Officer (RASOs) and commodity specialists.

Concepts and Definitions

The following concepts and definitions are used in the generation of statistics for crops.

Area Harvested - *The actual area from which harvests are realized. This excludes crop area which were totally damaged. It may be smaller than area planted. In crop statistics, this applies to temporary crops.*

Area Planted - *The actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops.*

Bearing Trees/Bearing Hills/Bearing Vines - *The number of trees/hills/vines where harvesting has been made in the past but may or may not have borne fruits or productive during the reference period due to cyclical production pattern of the crop. Hills applies to banana. Vines applies to pepper and grapes.*

Crop Production - *Is the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.*

Effective Area Harvested - *The actual area which is counted as many times as it was planted and harvested to same crops during the reference period. This concept applies to the harvest area reported for mono harvest temporary crops such as rice, corn, root crops and tubers and pechay.*

High Yielding Variety - *An improved cultivated variety with significantly higher yield and better quality under specific environment and improved farming conditions and practices than the traditional seed varieties being used; or any agricultural crop variety that can equal or exceed the yield of the current commercially grown variety in a particular locality. HYV may be locally or foreign bred.*

Industrial Crops - *Are Crops that are used as inputs to other industries. Examples are: rubber, castor beans, abaca and oil palm.*

Irrigated Palay - *Palay crop that requires standing water for its normal growth, not confined to lowland but also to high places where paddies are built for planting rice, requires irrigation water made available through artificial means (gravity, force, power pumps, etc.)*

Major Crops - *Refer to the top 19 crops in the Philippines, other than palay and corn which collectively account for more than 60 percent of the total crop production. These include coconut, sugarcane, banana, pineapple, coffee, mango, tobacco, abaca, peanut, mongo, cassava, sweet potato, tomato, garlic, onion, cabbage, eggplant, calamansi and rubber.*

Minor Crops - *Are all the remaining crops other than the major crops. This group accounts for about 40 percent of the total crop production.*

Non-Food Crops - *Are crops other than those used for food consumption. These are crops grown for their aesthetic values such as ornamental plants and cutflowers. These also include agriculture-derived products such as rice hay and coconut leaves.*

Permanent/Perennial Crops - *Are crops which occupy the land for a long period of time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive or fruit-bearing crops. Examples are: avocado, coffee, coconut and other fruit trees.*

Examples are: avocado, coffee, coconut and other fruit trees.

Priority Crops - *Refer to the identified national banner crops and various regional priority crops of the then Key Commercial Crops Development Program (KCCDP), High Value Crops Development Program (HVCDP) and now the Key Commodity Road Maps of the Department of Agriculture, which are being developed because of their industrial and commercial potentials.*

Rainfed Palay - *Palay crop that depends solely upon rainfall for its water supply; usually planted through transplanting or direct seeding in fields with dikes that retain water. There may be dikes in the field to hold water in the case of lowland-rainfed, or none in the case of upland palay.*

Root Crops - *Crops with well developed underground edible roots. They are classified into roots and tubers. Roots which are more starchy and rich in carbohydrates include gabi, ubi and white potato. Tubers include beets, radish, carrots and turnips.*

Temporary Crops - *Crops which are grown seasonally and which growing cycle less than one year and which must be sown and planted again for production after each harvest.*

Vegetable Crops - *Mostly temporary crops which are either classified agronomically as such or based on purpose for which they are used, like jackfruit which on their young stage, are classified as vegetables.*

White Corn - *Corn grown and used mainly for human consumption, and manufacture of corn by-products such as cornstarch, corn oil, syrup, dextrins, glucose, gluten, etc.*

Yellow Corn - *Corn used mainly as feed grains; includes all types of corn other than white.*

Yield - *Indicator of productivity derived by dividing total production by the area harvested.*

II. REGIONAL STATISTICS

A. CEREALS

PALAY

At the national level, palay production over the last five (5) years registered an average annual growth of 1.76 percent. From 16.82 million mt in 2008, production significantly increased to 18.03 million mt in 2012. Harvest area expanded by more than 229 thousand hectares or 5.2 percent from the 2008

level (Figure 1). The top producers were Central Luzon, Cagayan Valley, Western Visayas and Ilocos Region with a combined output of 9.68 million mt or 53.7 percent of the country's total palay production in 2012 (Figure 2). The same regions accounted for 49.7 percent of the total area harvested of 4.69 million hectares (Figure 3).

Palay production in irrigated areas reached 13.40 million mt. The top three (3) producing regions

were Central Luzon with 2.94 million mt; Cagayan Valley, 2.18 million mt; and Ilocos Region, 1.25 million mt. The combined output accounted for 47.5 percent of the country's total irrigated palay production in 2012 (Figure 4).

Production in rainfed areas was 4.64 million mt. Western Visayas was the leading producer with 24.5 percent share in the country's total rainfed palay output in 2012. Ilocos Region and Eastern Visayas followed with 10.6 percent and 9.2 percent shares, respectively (Figure 5).

CORN

Corn production increased from 6.93 million mt in 2008 to 7.41 million mt in 2012. It grew yearly by an average rate of 1.68 percent. The 2012 production was 6.25 percent higher than in 2011. The three (3) top producing regions were Cagayan Valley, Northern Mindanao and SOCCSKSARGEN with a combined output of 4.31 million mt or 58.1 percent of the national corn production (Figure 7).

Total area harvested was 2.59 million hectares in 2012. The three (3) major producing regions accounted for 47.8 percent of the country's total hectareage. Harvest area in 2012 at 2,593.8 thousand hectares recorded a 1.93 percent increase over the 2011 level (Figure 6).

The country's total white corn production in 2012 was 2.17 million mt. ARMM with an output of 622.8 thousand mt. shared the biggest at 28.8 percent. Northern Mindanao and SOCCSKSARGEN, the other leading producers came up with 363.9 thousand mt and 241.1 thousand mt, respectively (Figure 9).

Total area harvested to white corn in 2012 was 1.31 million hectares. Average yield was recorded at 1.65 mt per hectare.

Yellow corn production in 2012 was 5.24 million mt. Cagayan Valley was the top producer with 34.5 percent or 1.81 million mt share to the national output. SOCCSKSARGEN followed with 18.3 percent share and Northern Mindanao with 16.5 percent (Figure 8).

Area harvested of these three (3) top producing regions totaled 890.5 thousand hectares. Among them, Northern Mindanao recorded the highest yield at 4.72 mt per hectare. Cagayan Valley and SOCCSKSARGEN followed with yields at 4.43 mt per hectare and 3.21 mt per hectare, respectively.

B. FRUIT CROPS

BANANA

Banana production grew at an average annual rate of 1.51 percent over the last five years, from 8,687.62 thousand mt in 2008 to 9,226.00 thousand mt in 2012. The production in 2012 was higher by 0.67 percent than the 2011 level. Area planted to banana expanded from the 438,593 hectares in 2008 to 454,179 hectares in 2012 (Table 3.1) or an average annual growth of 0.88 percent (Figure 1).

The top producing regions in 2012 were Davao Region, Northern Mindanao and SOCCSKSARGEN with a combined contribution accounting for 72 percent of the total national output (Figure 2). Vast areas planted to banana were found in Davao Region and Northern Mindanao which shared 30 percent or nearly one third of the country's total area planted to banana (Figure 3).

Cavendish variety. From 2008-2012, production of Cavendish banana posted an average annual growth of 2.05 percent. In 2012, production was 4,694.64 thousand mt, 0.18 percent higher than previous year's level of 4,686.00 thousand mt. Area planted in 2012 was 82,413 hectares higher by 2.72 percent than in 2011 (Table 3.1.1). The annual growth rate of area planted was 2.33 percent.

Davao Region and Northern Mindanao, the top two Cavendish banana producing regions in 2012, shared 62 percent and 23 percent, respectively, to the total Cavendish banana production in the country. In terms of area, the two regions accounted for 79 percent of the national total area planted to the said commodity.

Lacatan variety. The average annual growth of Lacatan banana production during the five-year period was 1.43 percent. From 890.70 thousand mt in 2008, it grew to 942.89 thousand mt in 2012. Area planted likewise expanded from 53,591 hectares to 58,065 hectares (Table 3.1.2).

The top producing regions in 2012 were Davao Region and SOCCSKSARGEN and Northern Mindanao with 24 percent, 24 percent and 18 percent shares, respectively, to the national output. In terms of area planted to lacatan banana, these three leading producing regions accounted for 43 percent of the total.

Saba variety. Saba banana production in 2008 was 2,526.84 thousand mt. In 2012, the total production was 2,645.76 thousand mt at an average annual rate of 1.16 percent. Area planted, on the other hand, exhibited a slower growth of 0.58 percent, from 183,139 hectares in 2008 to 187,423 hectares in 2012 (Table 3.1.3).

Davao Region was the top producer of saba banana with 571.43 thousand mt accounting for 22 percent of the country's total production. SOCCSKSARGEN followed with 348.48 thousand mt and Northern Mindanao ranked third with 294.61 thousand mt. In terms of area planted, Davao Region recorded the largest at 22,165 hectares accounting for 12 percent of the total area planted in 2012. Western Visayas which shared 10 percent to the total area devoted to saba banana ranked second.

CALAMANSI

Calamansi production in 2008-2012 dropped by an average of 2.76 percent annually or from 199.68 thousand mt in 2008 to 178.51 thousand mt in 2012 (Figure 1). Area harvested, likewise, decreased by 0.15 percent or from 20,956 hectares in 2008 to 20,827 hectares in 2012 (Table 3.2).

MIMAROPA, the top calamansi producing region, shared 57 percent in the country's production in 2012 with 102.68 thousand mt (Figure 2). This was, however, about 3 percent below the 105.41 thousand mt production level in the previous year. Such was attributed to the drop in yield caused by frequent rains experienced in the region. Area planted of 7,7 thousand hectares in the region contributed 37 percent to the total calamansi area in the country.

MANGO

Mango production from 2008-2012 showed a declining trend except in 2010 or an annual average drop of 3.45 percent. The reported production in 2012 (768.23 thousand mt) was 2.52 percent lower from the previous year's output of 788.07 thousand mt. Area planted in the past five years expanded by an average annual rate of 0.25 percent or from 186,770 hectares in 2008 to 188,617 hectares in 2012 (Table 3.6).

Ilocos Region produced 265.63 thousand mt in 2012 which accounted for 34 percent of the national mango production (Figure 2) although the region suffered a 4.16 percent reduction in production over previous year's output level of 276.66 thousand mt. This was attributed to less fruits developed due to the early rainshower during the flowering stage of the crop in the first half of the 2012 and the effect of "Habagat" during the second half of the year. Central Luzon has the largest area planted to mango which expanded from 33,678 hectares in 2011 to 34,297 hectares in 2012 accounting for 18 percent of the total area planted to mango across the archipelago.

Carabao variety. During 2008-2012, carabao mango production dropped at an average of 3.01 percent annually. The 2012 production of 630.53 thousand mt was below the 2011 production of 638.95 thousand mt or by 1.3 percent (Table 3.6.1). Area planted to carabao mango in the same period grew by an average of 0.44 percent annually.

Ilocos Region remained the top carabao mango producing region in 2012. It accounted for 36 percent of the national total production. Other carabao mango producers were Central Visayas and Zamboanga Peninsula which shared 10 percent each of the country's production in 2012. Central Luzon remained the region with the largest area planted to carabao mango in 2012.

PINEAPPLE

In the past five years, pineapple production exhibited an average annual growth of 2.07 percent. The 2012 production of 2,397.63 thousand mt reflected a leap of 6.71 percent over last year's output level of 2,246.81 thousand mt. Area expanded by an average of 0.08 percent annually in 2008-2012 (Table 3.10).

Northern Mindanao remained the top producer in 2012 with 1,294.58 thousand mt and shared 53 percent in the national pineapple production. The region recorded an 11.63 percent increment

from the previous year's output of 1,159.70 thousand mt. This was attributed to expansion in area harvested from corporate farms, namely, Del Monte, Lapanday Agricultural and Development Corporation, Mount Kitanlad Agricultural Development Corporation, Davao Ventures Corporation and Dole Philippines. SOCCSKSARGEN ranked second with 800.06 thousand mt or 33 percent of the total pineapple production. In terms of area planted in 2012, SOCCSKSARGEN led other regions with 23,485 hectares followed by Northern Mindanao with 21,593 hectares (Figure 9).

ABACA

Area planted and production of abaca fluctuated during the reference years, 2008 to 2012. Production was lowest in 2009 at 65.83 thousand mt. It went up by 1.34 percent annually and settled at 68.51 thousand mt in 2012. Similarly, area planted was smallest in 2009 at 135.08 thousand hectares, but this expanded annually by 0.84 percent and by 2012 it was estimated at 138.52 thousand hectares. From 2008 to 2012, abaca production grew annually by 0.05 percent while area planted increased by 0.18 percent. In 2012, abaca production went down by 0.15 percent from the 2011 level of 68.61 thousand mt (Figure 1).

The 2012 abaca production in Davao Region dropped by 4.20 percent due to the adverse effects of Typhoon Pablo that hit the provinces of Compostela Valley, Davao del Norte, and Davao del Sur in the first week of December. The output of Eastern Visayas also declined

by 4.16 percent because in the municipalities of Mahaplag, Burauen, Kananga, Sogod, Bontoc, and Saint Bernard; and in the cities of Baybay, Maasin, and Ormoc; abaca trees was continuously affected by mosaic and bunchy top diseases.

Bicol Region was the top producer of abaca fiber in 2012. It produced 23.09 thousand mt of abaca or 33.70 percent of the country's total production. Eastern Visayas was the 2nd top abaca producer with 19.19 thousand mt with a share of 28.01 percent. The other major producers were Davao Region with 8.84 thousand mt or 12.90 percent share and Caraga Region with 5.97 thousand mt or 8.71 percent contribution to the national production (Figure 2).

R/ - Revised

CACAO

Cacao production decreased by an annual average rate of 1.58 percent from 2008 to 2012 (Figure 3). Annual average decreases in area planted, number of bearing trees and yield per bearing tree were recorded at respective rates of 1.08 percent, 0.75 percent and 0.84 percent. In 2012, production was 4.83 thousand mt, 0.52 percent lower than the level of 4.86 thousand mt in 2011. The largest drop in production was posted in Bukidnon. Land use conversion in Menzi Farms in Manolo Fortich, Bukidnon affected a substantial decrease in cacao area, thus, reducing production in Bukidnon by 54.84 percent or 170 mt.

The top producing regions and their contributions to the national output in 2012 were Davao Region, 77.89 percent; Northern Mindanao, 4.57 percent; Zamboanga Peninsula, 2.39 percent and Eastern Visayas, 2.37 percent (Figure 4).

CASHEW

Cashew production went up yearly by an average of 4.22 percent. From 112.33 thousand mt in 2008, production went up to 132.54 thousand mt in 2012 (Figure 5). Area planted to cashew increased annually by an average of 0.72 percent. From 27.52 thousand hectares in 2008, area rose to 28.32

thousand hectares in 2012. The number of bearing trees posted an average yearly increase of 1.91 percent from 2008 to 2012. However, land use conversion for residential and industrial uses had reduced cashew area in Central Luzon by 3.35 percent in 2012. This resulted in 10.68 percent or 728.49 mt decrease in production.

MIMAROPA, the top producer of cashew, contributed 94.31 percent to the country's production in 2012 (Figure 6). Central Luzon put in 4.60 percent.

COCONUT

Coconut production in 2012 was 15.86 million mt. Between 2008 and 2012, production grew by an average of 0.87 percent annually. In 2008, production was 15.32 million mt (Figure 7). Average yield also increased to 46.06 kilograms per bearing tree in 2012 from 45.14 kilograms per bearing tree in 2008. Annual growth rate averaged 0.50 percent (Table 4.4a). These increases were brought about by the recovery of coconut trees from the adverse effects of El Niño phenomenon in 2010, expanding fertilization program and disease control interventions of the Philippine Coconut Authority (PCA).

From 2008 to 2012, area planted and number of bearing trees continued to increase and its corresponding average annual rates were 1.41 percent and 0.37 percent.

The top coconut producer was Davao Region with a 17.15 percent share in the national production in 2012. The other major producers were Northern Mindanao, Eastern Visayas, Zamboanga Peninsula and CALABARZON (Figure 8).

COFFEE

Throughout the period 2008-2012, coffee production went down by an average annual rate of 2.25 percent (Figure 1). In 2012, coffee production was estimated at 88.94 thousand mt which was 0.47 percent more than the 2011 production of 88.53 thousand mt. The increasing production was attributed to the recovery of coffee trees from the adverse effects of El Niño in 2010. Area planted and number of bearing trees contracted annually by average rate of 0.67 percent and 0.66 percent, respectively (Figure 9).

SOCCSKSARGEN was the top coffee producer in 2012 with 31.33 percent contribution to the country's coffee production. The second top producer was Davao Region with 21.31 percent share in the national production, followed by ARMM, CALABARZON, Western Visayas, and CAR (Figure 10).

Of the coffee varieties, Robusta had the highest share of 71.76 percent in the total production of all varieties (Figure 11).

R/ - Revised

COTTON

Cotton production in 2012 was registered at 0.08 thousand mt which was 49.80 percent lower than the 0.74 thousand mt in 2008. However, it was 121.83 percent higher than the 0.03 thousand mt of production in 2010 (Figure 1). The increase in output was attributed to the larger area harvested in Ilocos Norte and Negros Oriental.

Figure 13. Cotton: Top Producing Provinces, Philippines, 2012

The top producing regions and their shares in the national output in 2012 were Western Visayas, 71.21 percent; SOCCSKSARGEN, 17.73 percent; Ilocos Region, 6.10 percent; and Central Visayas, 4.95 (Figure 12).

Over the period 2008 to 2012, production and area harvested of cotton were highest in 2008 at 0.74 thousand mt and 0.54 thousand hectares. From 2008 to 2012 production and area dropped significantly (Figure 13).

RUBBER

Rubber production rose from 411.04 thousand mt in 2008 to 443.00 thousand mt in 2012 or by average yearly rate of 1.89 percent (Figure 14). The 2012 output was also 4.06 percent higher than the 425.71 thousand mt production in 2011. The higher output was due to increased number of tappable trees in Palawan, Bukidnon and the producing provinces of Zamboanga Peninsula, Davao Region, SOCCSKSARGEN, Caraga, and ARMM.

From 2008 to 2012, average annual gains were 9.35 percent in area planted and 4.14 percent in number of tappable trees.

In 2012, the combined output of the top two (2) producing regions of Zamboanga Peninsula and SOCCSKSARGEN was 80.95 percent of the national rubber production (Figure 15). Their combined area and number of tappable trees accounted for 66.44 percent and 78.93 percent of the national totals, respectively.

SUGARCANE

Sugarcane production registered an average annual decrease of 0.19 percent from 2008 to 2012 (Figure 16). It showed a fluctuating trend with the lowest record posted in 2010 and the highest in 2011. In 2012, production was 26.40 million mt, 6.98 percent lower than the 28.38 million mt output in 2011. The decrease in production was due to smaller canes harvested from ratooned crops in Iloilo. Less fertilizer usage in Batangas and North Cotabato and the early completion of harvesting and milling in Bukidnon also contributed for the output reduction.

In 2012, Western Visayas was the largest producer sharing 14.58 million mt or 55.23 percent in the national sugarcane production (Figure 17). Also, the region had the largest area harvested of 214.34 thousand hectares which was 49.47 percent of the country's sugarcane area (Table 4.8).

TOBACCO

From a low 32.47 thousand mt in 2008, tobacco production went up annually by an average of 10.31 percent. In 2012, it was 48.08 thousand mt (Figure 18). Area harvested to tobacco increased by an average of 11.29 percent annually. From 22.18 thousand hectares in 2008, area harvested rose to 34.03 thousand hectares in 2012. This was a result of the expansion in area planted to 34.03 thousand hectares in 2012 from 32.24 thousand hectares in 2011. Growers were motivated by the high price of dried tobacco leaves. The presence of financial assistance from private institutions such as Universal Leaf Philippines, Inc.; Philip Morris-Fortune Tobacco Corp.; and Lancaster Philippines, Inc. (LPI) in Ilocos Region; and Isabela Leaf Tobacco Co., Inc. in Isabela also bolstered tobacco production.

In 2012, Ilocos Region remained as the top tobacco producer and contributed 67.68 percent to the national production (Figure 19).

Virginia tobacco, the most preferred tobacco variety, accounted for 49.18 percent to the national output. Native variety shared 21.89 percent (Figure 20).

CABBAGE

In 2008 to 2012, cabbage production fluctuated (Table 5.1). Highest output was noted in 2010 and lowest in 2009. Production in 2012 was 126.36 thousand mt or 0.84 percent higher than the production level in 2011 placed at 125.31 thousand mt. Higher production was attributed to bigger and better quality of heads produced brought about by favorable weather condition in Central Visayas, Northern Mindanao, Davao Region and SOCCSKSARGEN. There was also reported early control of cabbage worm in Cagayan Valley. However, area harvested decreased by 0.27 percent from 8.55 thousand hectares in 2011 to 8.53 thousand hectares in 2012.

Cordillera Administrative Region (CAR) remained the top producer of cabbage at 99.36 thousand mt or 79 percent of the country's total production in 2012 (Figure 2). Central Visayas placed second with 7 percent share followed by Northern Mindanao with 5 percent.

CAMOTE

Camote production continuously decreased from 572.66 thousand mt in 2008 to 516.37 thousand mt in 2012 at an average annual rate of 2.54 percent. Area harvested similarly showed a downward trend from 116.46 thousand hectares in 2008 to 101.03 thousand hectares in 2012 (Figure 3). Despite the reductions in both production and area harvested, yield per hectare improved from 4.92 mt in 2008 to 5.11 mt in 2012 registering an average annual growth of 0.96 percent.

Eastern Visayas Region was the top producer of camote in 2012 at 123.35 thousand mt or 24 percent of the national production (Figure 4). The second largest producer was Bicol Region with 91.94 thousand mt, followed by Western Visayas with 45.64 thousand mt (Table 5.2). Their respective shares to the national output were 18 percent and 9 percent, respectively (Figure 4).

CASSAVA

Cassava production during 2008 to 2012 grew from 1.94 million mt to 2.22 million mt at an annual rate of 3.46 percent (Table 5.3). The output gain was brought about by the continuous expansion of contract growing areas in Central Luzon, Bicol and Northern Mindanao regions. The increasing demand for industrial and commercial uses likewise encouraged growers in SOCCSKSARGEN

and ARMM to expand production areas. Average yield continuously improved from 9.17 mt per hectare in 2008 to 10.23 mt per hectare in 2012 with an average annual growth of 2.77 percent.

ARMM with 1.02 million mt of production in 2012 had the lion's share to the national cassava output (Table 5.3). It accounted for 46 percent of the country's total production in 2012 (Figure 6). Northern Mindanao ranked second with 25 percent share.

EGGPLANT

Eggplant production grew from 199.58 thousand mt in 2008 to 211.85 thousand mt in 2012 at an average annual growth of 1.51 percent (Figure 7). Area harvested expanded from 21.30 thousand hectares in 2008 to 21.48 thousand hectares in 2012 at an average annual rate of 0.22 percent. Yield per hectare effected an improvement from 9.37 mt in 2008 to 9.86 mt in 2012.

In 2012, Ilocos Region remained the top producer of eggplant at 76.19 thousand mt or 36 percent of the total national production (Figure 8). CALABARZON trailed with 36.15 thousand mt or 17 percent share to the gross national output for eggplant. Cagayan Valley and Central Luzon placed third, each with 19 thousand mt or 9 percent share.

GARLIC

Garlic production from 2008 to 2012 decreased continuously from 11.35 thousand mt to 8.49 thousand mt at an annual average rate of 4.34 percent (Figure 9). In like manner, area harvested decreased at an average annual rate of 9.37 percent. This was due to the reported crop shifting to native onion and tobacco in Ilocos Norte as farmers were unable to compete with the low-priced imported garlic in the market.

Ilocos Region was the leading garlic producer at 5.62 thousand mt and shared two-thirds to the country's total production in 2012 (Figure 10). MIMAROPA ranked second with 2.11 thousand mt or about 25 percent share.

MONGO

Mongo production fluctuated during 2008 to 2012. Biggest production at 32.96 thousand mt was recorded in 2011. In contrast, the lowest level of production at 27.06 thousand mt was in 2010. The 2012 production of 32.36 thousand mt was 1.81 percent below the 2011 output (Figure 11). However, area harvested increased at an average annual rate of 2.84 percent, from 39.92 thousand hectares in 2008 to 44.32 thousand hectares in 2012. Average yield per hectare slid from 0.74 mt in 2008 to 0.73 mt in 2012.

Ilocos Region remained the largest producer of mongo at 11.23 thousand mt or 35 percent of the country's total production in 2012. Cagayan Valley ranked second with 9.03 thousand mt or 28 percent.

ONION

Onion production fluctuated from 128.92 thousand mt in 2008 to 124.82 thousand mt in 2012. Biggest national output reached 135.38 thousand mt in 2010 (Figure 13). Area harvested in 2010 was 15.17 thousand hectares. Yield per hectare, however was reduced from 8.84 mt in 2008 to 8.34 mt in 2012.

Central Luzon and Ilocos Region were the country's top onion producers in 2012 with respective shares of 58 percent and 33 percent to the total national production. (Figure 14).

PEANUT

Peanut production showed a downward trend from 30.25 thousand mt in 2008 to 29.13 thousand mt in 2012 at an average annual rate of 0.90 percent. Similarly, area harvested decreased from 27.73 thousand hectares to 26.11 thousand hectares at an average annual rate of 1.48 percent (Figure 15). However, yield per hectare increased from 1.09 mt to 1.12 mt.

However, yield per hectare increased from 1.09 mt to 1.12 mt.

About 12 thousand mt or 40 percent of the country's peanut production came from Ilocos Region (Figure 16). The other top producing regions were Cagayan Valley (4 thousand mt), Northern Mindanao (3 thousand mt), Western Visayas (2 thousand mt) and Central Luzon (2 thousand mt) (Table 5.8).

TOMATO

Tomato production moved upward from 195.81 thousand mt in 2008 to 204.27 thousand mt in 2010 at an average annual growth of 2.14 percent. However, production went down by 0.17 percent in 2012. Area showed the same increasing pattern from 2008 to 2010 at an average annual growth of 0.05 percent. In 2012, area harvested slid to 17.34 thousand hectares or an annual

average rate of 1.91 percent from its 2010 level of 17.66 thousand hectares (Figure 17). Average yield per hectare recorded an average annual growth of 1.42 percent, from 11.10 mt in 2008 to 11.74 mt in 2012 (Table 5.9).

Ilocos Region was consistently the top producer at 70.39 thousand mt in 2012 or 34 percent of the country's total tomato production (Figure 18). The other top producing regions and their shares to total production were Northern Mindanao at 24 percent, Central Luzon at 11 percent and CALABARZON at 9 percent.

OTHER VEGETABLES

Figures 19, 20 and 21 below show the production trends of other vegetables. Production of gourd, ubi and habitchuelas continuously decreased from 2008 to 2012 at an average annual rate of 2.86 percent, 9.91 percent and 2.41 percent, respectively. Gabi, native pechay and asparagus production decreased from 2008 to 2011 but managed to increase in 2012. Broccoli production reflected continuous improvements from 2.60 thousand mt in 2008 to 2.99 thousand mt in 2012 at an average annual growth of 3.42 percent. The rest of the other vegetables production showed fluctuating trends from 2008 to 2012.
